

## **Madison County Dust Control Policy**

**Adopted March 12, 2002**

The resident is granted permission to place lignin, calcium chloride or magnesium chloride on the public highway for the purposes of Dust Control, the cost of which is to be borne by the resident.

The resident's contractor shall give sufficient notice to the Office of the Madison County Engineer, prior to the intended application of the lignin, calcium chloride or magnesium chloride, in order that the road can be bladed and shaped.

The resident is responsible for maintaining a suitable driving surface on the treated section of the road. If the resident fails to fill any potholes or washouts that develop, Madison County will blade the affected area to restore a satisfactory and safe driving surface without notice to the resident. Madison County will not be responsible for reapplying treatment.

The resident shall provide the necessary flags and signing during and after treating the surface. The resident is responsible to maintain clearly visible flagging after treatment to aid the motor grader operator in identifying the treated area.

This policy is valid for the time period of May 1 to October 15. Before or after this time period the County will routinely maintain the rock surface by blading.
